ATTN: Gaylor Electric, Aaron Mohr
RE: Letter of Recommendation

To whom it may concern,

I wanted to take the opportunity to thank Gaylor Electric for delivering a successful project at Amavida Senior Living in Fort Myers, Florida. Throughout this project, the team worked hard to ensure a timely, cost effective and quality driven completion.

Gaylor was originally hired to complete the underground work for Amavida. Faced with some design challenges early on, the team was able to devise and execute a new plan based on the owners requirements. This was especially important when it came to maintaining the budget by bringing value engineering options to the table. After the successful delivery of the underground work, the Gaylor team earned the other portion of the construction contract and executed the rest of the job with precision.

Gaylor Electric's ability to communicate with other subcontractors, as team members, helped created an environment of cooperation and success for all parties involved. During the project, trade coordination issues would arise and Gaylor was very responsive when it came to finding quick resolutions. They approached each situation with a fair and positive attitude and exhausted their crew's capabilities for the benefit of the overall success of the project. The whole team was always present at our coordination meetings and came to the group with real solutions every time.

Overall, the Gaylor team demonstrated safe practices and helped to resolve conflicts in a professional manner. It would be our pleasure to work with this high-performing contractor in the future.

Sincerely,

Jeff Miller
Project Manager
